Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

1-10. (canceled)

- 11. (currently amended) A method for producing a mouse recipient that produces an antibody reactive to an antigen protein for an autoimmune disease and/or has activated T cells reactive to the antigen protein, which comprises the steps of:
- (a) immunizing, with the antigen protein for the autoimmune disease, a mouse donor that (i) lacks a gene encoding the antigen protein and (ii) develops immune cells,
 - (b) preparing immune cells from the donor, and
- (c) transplanting the immune cells to the recipient that (iii) is the same species as the donor, and (iv) has the same genetic background and/or is immunodeficient, thereby producing a mouse recipient that produces an antibody reactive to an antigen protein for an autoimmune disease and/or has activated T cells activation reactive to the antigen protein, wherein the antigen protein is desmoglein 3 protein and the autoimmune disease is pemphigus vulgaris.
- 12. (previously presented) The method of claim 11, wherein the recipient is immunodeficient.
- 13. (previously presented) The method of claim 12, wherein the recipient lacks a RAG2 gene.
- 14. (previously presented) The method of claim 11, wherein the immune cells are splenocytes.

15-25. (canceled)
